Mark and Ryan-

Do either of you have a status update on this site? We did not hear anymore after Doug said he was going to collect water samples so we weren't sure if the tank removal happened as planned or if it was postponed. The MCPA did not receive any paperwork stating the date changed. Thanks for any help.

Subject: H & L Oil UST Removal

I called the owner and he plans to go ahead with the removal. He indicated that he is going to have Doug sample the water to see if the city of Onamia will take the water. If he can get the water tested this afternoon and the city will take the water he plans to go ahead with the removal tomorrow. I am not sure what the owner's next step would be if the water comes back contaminated. It sounds like he may need to get some more money, but I am not exactly sure.

I mentioned that we plan to inspect the facility in the spring and if the USTs are still in the ground at that time then we most likely will issue an order to remove the USTs.
